Summary

Analytics Engineer with 3+ years of experience designing and scaling enterprise data solutions across the modern data stack. Expert in building high-performance semantic models, ETL/ELT pipelines, and self-service BI architectures using Python, advanced SQL, dbt, and Power BI. Proven ability to translate complex business requirements into optimized dimensional data models and automated workflows that drive measurable impact for stakeholders. Strong track record implementing analytics infrastructure that balances scalability, performance, and maintainability.

Experience

HOLMAN Analytics Engineer	Mt Laurel, New Jersey <i>July 2023 – Present</i>
- Built enterprise analytical data products end-to-end, from warehouse transformations through dimensional modeling and semantic-layer design, using dbt to develop reusable data models that unified 40+ client-specific reports into a self-service analytics platform supporting 400+ users. - Owned Holman’s enterprise gold layer, designing and developing 50+ dbt models across 10 business domains with incremental processing patterns and clustering optimisation to transform and curate warehouse data into trusted analytical assets consumed by semantic models, reporting, and downstream analytics. - Designed the analytical data model and semantic layer for a fleet performance benchmarking platform, standardizing 20+ KPIs and their underlying business definitions to enable consistent peer-group, industry, and client-to-client comparisons to provide better insights to clients about their fleet health. - Consolidated 8 siloed call-center reporting datasets into a centralized dimensional and semantic model, standardizing shared business logic and eliminating manual Excel workflows, saving 200+ hours annually. - Implemented Git-based Power BI deployment workflows using PBIR artifacts, TMDL files, CI/CD pipelines, GitHub Copilot, and Power BI MCP Server to streamline model development, documentation, and enterprise BI deployments.	

COLLABERA Data Analyst Intern	Basking Ridge, New Jersey <i>May 2023 – July 2023</i>
- Developed predictive churn model (Python: Scikit-learn, Pandas) achieving 78% accuracy to identify at-risk customers for retention campaigns - Consolidated 8+ data sources via SQL and Power BI, optimizing queries and reducing dashboard refresh time by 30% - Built reusable DAX calculation groups for time-intelligence logic, standardizing formulas across Power BI reports	

LABWARE Data Science Intern	Wilmington, Delaware <i>June 2022 – September 2022</i>
- Built an ETL pipeline processing 2M+ crime records using Python, AWS S3, and Snowflake, creating a centralized analytical dataset for analytics and ML. - Transformed a large-scale crime data for XGBoost modeling, achieving 80% classification accuracy in identifying crime types and high-risk geographic patterns. - Developed Tableau dashboards integrating ML predictions to visualize crime hotspots and support data-driven decision-making.	

Education

Drexel University <i>Master of Science in Business Analytics</i> (GPA: 3.95/4.00)	Philadelphia, PA
University of Pune <i>Bachelor of Engineering in Electronics & Telecommunications</i>	Pune, India

Projects	View All Projects on GitHub →
-----------------	---

H-1B Wage Map

- Built Python ETL pipeline processing 200K+ historical H-1B filings into static JSON shards, achieving O(1) lookup for real-time wage intelligence queries
- Engineered interactive geospatial map using Mapbox GL JS with client-side GeoJSON rendering for sub-second county-level drill-down across 3,200+ US regions
- Integrated OpenAI API with RAG for AI-powered SOC code discovery matching job descriptions to official O*NET occupations

OrderIQ Chatbot

- Designed an LLM-powered text-to-SQL pipeline with schema-grounded prompting, SQL allow-listing via sqlglot, and read-only execution
- Modeled raw e-commerce data into a tested, documented dbt One-Big-Table on DuckDB, powering reliable analytics and LLM-driven querying for stakeholders
- Delivered a full-stack React, TypeScript chatbot with deterministic chart/table/KPI visualization logic, turning plain-language questions into business insights

Technical Skills

Core Languages: Python, SQL (Query Optimization, Window Functions, Execution Plans, Complex Joins)
Analytics Platforms & BI: Power BI (Advanced: DAX, Calculation Groups, RLS, Performance Analyzer, DAX Studio, TMDL, PBIP, CI/CD), Tableau
Data Engineering & Transformation: dbt, Databricks, Apache Spark (PySpark), ETL/ELT, Incremental Models, Materialized Views, Data Lineage
Cloud & Databases: AWS (S3, Redshift), Microsoft Fabric, Snowflake, PostgreSQL, MS SQL Server, MySQL, Git/GitHub
Data Science & Predictive Modeling: Scikit-learn, Pandas, Predictive Modeling (Classification, Time Series), Generative AI Integration
